

ABSTRACT OF THE DISCLOSURE

An exemplary embodiment of the invention is a method of managing test files among a plurality of test stations for testing products. The method includes obtaining a test file having a test file name and assigning a unique identifier to the test file. Enforcement criteria are also assigned to the test file. The test file, test file name, the unique identifier and the enforcement criteria are stored. The test file is then conditionally distributed to at least one of the plurality of test stations according to the enforcement criteria. An alternate embodiment is a system for implementing the method.
